数据库表设计

返回值Overview:

基本操作:

获取数据库

status详解

附录:

数据库表

获取完整数据库

增量数据库:

数据库表设计

- user(uid, type, username, password)
- course(cid, cname, tid, tname, intro, likes, uid)
- comments(coid, uid, content, cid)
- teacher(tid, tname)
- teaching(cid, tid)
- incrementTable(addHash,addTime, opcode,content)

返回值Overview:

返回格式为JSON,一定含有属性 status

基本操作:

这里仅包含普通用户操作

- 注册: /autho/register , POST请求,需要有username, password
- 登陆: /autho/login , POST请求,需要有username, password
- (需要登录) 获取数据库: /mani/get_data/<current_hash> , POST或GET
 - 如果是获取完整数据库,则 current_hash 为0。JSON含属性: table_list, tables
 - 否则附上当前数据库的hash值。JSON含属性: table, values
- 退出: /logout ,GET请求

涉嫌修改的操作:返回值属性多了 new_hash

- (需要登录)创建新评论: /mani/create_comment , POST,需要有cid, comment
- (需要登录)删除评论: /mani/delete_comment ,POST,需要coid,而且是本人创建
- (需要登录)创建新课程: /mani/create_course ,POST,需要有cname, tname, intro
- (需要登录)删除课程: /mani/delete_comment ,POST,需要cid,而且是本人创建

获取数据库

需要登陆才能够获取数据。

完整数据库属性有:

- status:
- table_list:返回table的列表
- tables: 包含table名以及record的列表

完整数据库返回例子:

包含 user, course, comments, teacher, teaching表

- user(uid, username)
- course(cid, cname, tid, tname, intro, likes)
- comments(coid, uid, content, cid)
- teacher(tid, tname)
- teaching(cid, tid)

status详解

通用错误码:

- 1: 尚未登录,无法执行操作
- 0: 成功退出

用户: (uid, type, username)

- 700:成功创建用户
- 701:用户已存在
- 702:缺少参数username or password

评论:

- 创建评论(coid, uid, comment, cid)
 - 100: 成功创建评论
 - 102: 缺少参数,无cid或者comment
- 删除评论、更新评论(coid)
 - 200: 成功删除评论
 - 202: 缺少参数,无coid/无评论
 - 203: 无此coid
 - 204: 无权限删除评论(uid与登录者不符)

课程:

- 创建课程(cid, cname, tid, intro, uid)
 - 300: 成功创建课程
 - 302: 缺少参数,无cname, tname, intro
- 删除课程、更新课程(cid)
 - 400: 成功删除课程
 - 402: 缺少参数,无cid
 - 403: 无此cid
 - 404: 无权限删除课程(uid与登录者不符)
- 喜爱课程(likes +1, cid)
 - 500: 成功喜爱课程
 - 502: 缺少参数,无cid
- 获取db数据
 - 600:成功
 - 601:已是最新版本
 - 602:获取到increment table
 - 603:错误hash值

附录:

数据库表

```
create database if not exists rema;
use rema;
create table if not exists user(
         uid int not null auto_increment,
         type char(1) not null default 'U',
         username varchar(20) unique not null,
         password varchar(20) not null,
         primary key(uid)
);
insert into user (uid, type, username, password) values
    (1, 'A', 'karl-han', 'admin'),
(2, 'A', 'rema', 'admin');
create table if not exists course(
         cid int not null auto_increment,
         cname varchar(30),
         tid int not null,
         tname varchar(30),
         intro varchar(300),
         likes int not null default 0,
         uid int not null,
         primary key(cid)
);
insert into course (cid, cname, tid, intro) values
(1, '计算机安全学', 1, '学习与密码学相关知识,了解密码学历史'),
(2, '编译原理', 2, '学习如何将代码转换成机器可执行代码的整个过程');
create table if not exists comments(
         coid int not null auto_increment,
         uid int not null,
         content varchar(300) not null,
         cid int not null,
         primary key(coid)
);
insert into comments (uid, content, cid) values
    (1, '这门课真的不错', 1),
(2, '这门课真的不错', 2);
create table if not exists teacher(
     tid int not null auto_increment,
         tname varchar(30),
         primary key(tid)
insert into teacher (tid, tname) values
    (1, 'Bintou'),
(2, '浴帘王子');
create table if not exists teaching(
         cid int not null,
         tid int not null,
         primary key(cid, tid)
);
insert into teaching (cid, tid) values
    (1, 1), (2, 2);
create table if not exists incrementTable(
    addHash binary(10) not null,
    addTime timestamp(2),
    opcode int not null,
    content varchar(350)
```

获取完整数据库

▼ http -f POST localhost:5000/mani/get_data/000 Cookie:session=eyJ1aWQiOjR9.XfYkzA.o7g2EZjVHY9UjDUipFVB2mDbJ7g
